This book, first published in 1998, asks why fundraising nonprofits are mimicking private firms and what consequences this is having.

Nonprofit organizations are changing dramatically in the ways they are financed. They are becoming increasingly commercial, operating more like private firms. Far more is involved than the generation of revenue. As donations decline in importance and user fees and money-raising ancillary activities come to dominate, they bring side-effects on the social missions that justify public support. This book examines these little-recognized relationships for the overall nonprofit charitable sector and then focuses on each of six industries; important differences are found among hospitals, universities, social service providers, zoos, museums, and public broadcasting.

Not-for-profit organizations play a critical role in the American economy. In health care, education, culture, and religion, we trust not-for-profit firms to serve the interests of their donors, customers, employees, and society at large. We know that such firms don't try to maximize profits, but what do they maximize? This book attempts to answer that question, assembling leading experts on the economics of the not-for-profit sector to examine the problems of the health care industry, art museums, universities, and even the medieval church. Contributors look at a number of different aspects of not-for-profit operations, from the problems of fundraising, endowments, and governance to specific issues like hospital advertising. The picture that emerges is complex and surprising. In some cases, not-for-profit firms appear to work extremely well: competition for workers, customers, and donors leads not-for-profit organizations to function as efficiently as any for-profit firm. In other contexts, large endowments and weak governance allow elite workers to maximize their own interests, rather than those of their donors, customers, or society at large. Taken together, these papers greatly advance our knowledge of the dynamics and operations of not-for-profit organizations, revealing the under-explored systems of pressures and challenges that shape their governance.

On July 12, 1966, the Medical Care Insurance Act was passed by the federal House of Commons after a ferocious public debate that pitted the vast majority of Canadians against a powerful alliance of business, insurance companies, and doctors. More than thirty years later, the same battle is being fought all over again. Only now, the forces opposed to medicare are more ideologically unified, more richly endowed, and tied to transnational corporations whose power exceeds that of entire countries. In *Profit Is Not the Cure*, Maude Barlow traces the history of medicare in Canada. She compares it with both public and private systems in other parts of the world. And she contrasts it with the brutally divisive system that exists in the United States, where forty-four million people have no medical insurance, and millions more get minimal care through profit-driven health maintenance organizations. From the point of view of most patients, the United States health-care model is a disaster. But the proponents of privatization in Canada, supported by the right-wing media and corporate lobbyists, are determined to impose American-style "reforms" on the Canadian public. Three provinces - British Columbia, Alberta, and Ontario - are moving ahead rapidly to enlarge the role of commerce in the provision of health-care services. They are introducing user fees, delisting procedures that previously were covered, and encouraging private corporations to move into areas that used to be the exclusive domain of the public system. While the prime minister and federal cabinet have paid lipservice to the principles of medicare, they have made it clear by their actions that they will do nothing to impede the destruction of those principles by the provinces. In fact, their enthusiastic support of NAFTA, and the impending Free Trade Agreement of the Americas (FTAA) and General Agreement on Trade in Services (GATS), has made the defence of medicare increasingly difficult. Canadians overwhelmingly support medicare. Many,

however, have been persuaded that it is a luxury we can no longer afford. Maude Barlow argues that this proposition is wrong. An earlier generation fought a bitter battle to bring medicare into existence. Another battle must be fought now to save it. But we owe it to the founders of the system, as well as to future generations, to take up the cause again. This important book shows the way.

"[This book is] the most authoritative assessment of the advantages and disadvantages of recent trends toward the commercialization of health care," says Robert Pear of The New York Times. This major study by the Institute of Medicine examines virtually all aspects of for-profit health care in the United States, including the quality and availability of health care, the cost of medical care, access to financial capital, implications for education and research, and the fiduciary role of the physician. In addition to the report, the book contains 15 papers by experts in the field of for-profit health care covering a broad range of topics--from trends in the growth of major investor-owned hospital companies to the ethical issues in for-profit health care. "The report makes a lasting contribution to the health policy literature."--Journal of Health Politics, Policy and Law.

How do companies in mature markets--where savings from cost-cutting have been exhausted and breakthrough innovations are hard to come by--achieve sustainable increases in profits? For decades, managers have been told the answer lies in pursuing high market share. But Hermann Simon, Frank F. Bilstein, and Frank Luby argue that this misguided advice has destroyed, rather than created, an additional profit potential. In *Manage for Profit, Not for Share*, the authors contend that companies can extract a profit potential of 1%-3 % of revenue by pursuing a profit, rather than a market share, orientation. Based on their extensive consulting work, the authors lay out a practical, proven program for making significantly more money by reconfiguring the marketing mix to sell existing products and services in different ways. The book offers practical strategies managers can use to differentiate mature products, raise prices effectively, time promotional activities properly, better understand consumer preferences, and more. A convincing counterargument to the reigning market share dogma, this book outlines the new mind-set and tools managers will need to bring their companies closer to peak profit performance.

A trillion-dollar industry, the US non-profit sector is one of the world's largest economies. From art museums and university hospitals to think tanks and church charities, over 1.5 million organizations of staggering diversity share the tax-exempt 501(c)(3) designation, if little else. Many social justice organizations have joined this world, often blunting political goals to satisfy government and foundation mandates. But even as funding shrinks, many activists often find it difficult to imagine movement-building outside the non-profit model. *The Revolution Will Not Be Funded* gathers essays by radical activists, educators, and non-profit staff from around the globe who critically rethink the long-term consequences of what they call the "non-profit industrial complex." Drawing on their own experiences, the contributors track the history of non-profits and provide strategies to transform and work outside them. Urgent and visionary, *The Revolution Will Not Be Funded* presents a biting critique of the quietly devastating role the non-profit industrial complex plays in managing dissent. Contributors.
